EDUCATION

Western University

Bachelor of Engineering Science, Software Engineering

London, ON

May 2026

- GPA: 3.7/4.0

SKILLS

- Collaborative Team Lead experienced in coordinating Agile sprints, managing project backlogs in Jira, and driving cross-functional team success through clear technical documentation and communication.
- Proficient in Python, JavaScript, SQL, HTML, CSS, React.js, Git, Postman, and Jira.
- Experience with Java, C++, C, Assembly, Docker, AWS AI, GraphQL, YOLO, TensorFlow, and Pandas.
- Bilingual in Mandarin and English.

EXPERIENCE

Xinosys Co. Ltd | Software Engineering Intern

Remote | May 2024 – Sept 2024

- Engineered a **Python-based Translation AI** supporting 5+ languages using **Amazon Haiku**, achieving 80%+ accuracy after manually validating 2,000+ terms against Google Translate standards.
- Designed a scalable web crawler using **Python** and **Scrapy** to aggregate Amazon product training data, optimizing throughput from 5,300 to over **10,000 results/hour** via proxy rotation.
- Improved company **Linux server** infrastructure by recombining hardware and applying software optimizations, resulting in a measurable 30% increase in processing power.

Xinosys Co. Ltd | Full Stack Engineering Intern

Remote | May 2023 – Sept 2023

- Developed a **GraphQL API** for the **B2B** platform with custom resolvers, which reduced average API payload size by 40% and improved frontend dashboard load times by 250ms.
- Integrated a **React.js** front-end with **Spring Boot** backend services, utilizing **Docker** to containerize local testing environments for consistent and rapid validation.
- Executed comprehensive **Android QA** testing and reported all findings and workflows via **Slack**, ensuring the elimination of critical UI inconsistencies prior to deployment.

PROJECTS

Accessibility AI (Capstone Project) | Python, Computer Vision, YOLO, Machine Learning

- Placed First at Rehabilitation Engineering and Assistive Technology Society of North America's 2026 Student Scientific Paper Competition and accepted for Poster presentation at the 48th Annual International Conference of the IEEE Engineering in Medicine and Biology Society
- Engineering a **computer vision** pipeline using **YOLO** and **ArUco** markers to detect washroom fixtures and gauge precise dimensions, automatically identifying spacing and height violations against AODA standards.
- Designing the tool to democratize accessibility auditing, enabling non-engineers to identify liability risks through an automated "stoplight" (Pass/Fail) validation system.

VisionTrack | React Native, Express.js, Node.js, YugabyteDB

- Engineered a secure, full-stack medical record application using **React Native** and **YugabyteDB**, designed to streamline patient data accessibility for under-served healthcare facilities in India, reducing the time taken for retrieval from minutes and hours to seconds
- Coordinated a team of 4 through **Agile** sprints using **Jira** for task tracking and **Confluence** for documentation, ensuring organized workflow and timely delivery of project milestones.

Looney Tuney | Python

- Created a generative **Music Composition AI** using **LSTM neural networks** that composes original classical pieces based on user parameters, automating the creative process for background score generation.
- Trained the model on the MAESTRO dataset to achieve coherent melodic phrasing and stable tempo patterns, resulting in generated audio indistinguishable from intermediate human composition.
